**Subject:** Resignation of Tim Lusk Director August 2018

Trans Power NZ Ltd

1 of 3

Board of Directors Chairman T Ryall

CEO Management Team.

Re Resignation of Trans Power Director Tim Lusk 20 August 2018.

It is with interest that the most Senior Professional Electrical Engineer on the Trans Power Board of Directors is Resigning.

His Exemplary Career within Transpower as a Specialist in Governor Control Systems was highly valued by all of those who worked with him.

As a highly Rated, Governor Expert Specialist, his responsibilities was always, was to ensure, that the Grid System functioned and reacted to all the active Parameters Associated with the Maintenance of the Grid Frequency, at the Standard 50 Hz plus and minus 1.5 % Limits under all of the Prevailing conditions present at the Time.

#### **A Previewed Content.**

The writer on the 3/8/2018, informed the Trans Power Director's and Management Team of Seven, to show some Honesty and Integrity of their Endeavours within their Allotted Tasks. By pointing out that in the Past and within the Present Period Trans Power have been Promoting, Supporting and Encouraging the Largest Scam and Corruption Operation in NZ.

They, have been leading the New Zealand Energy Direction by Allowing the Expansion and Penetration of ASYNCHRONOUS GENERATION INTO THE GRID RETICULATED TRANSMISSION SYSTEM.

They, have Directly and Effectively bypassed the Stringent Electricity Participation Code 2010 Act Requirements, for the Country to Accept

2 of 3

and to be supplied with a Twin Frequency System 50 and 3000 HZ Energy Systems, which requires Electricity Authority Intervention and Investigation.

In Effect, the Joining of the Clean Synchronous Alternators Energies to the Leading Asynchronous Harmonic Current Energies has created the Present Dirty Energy Power System that they now have been Distributing on the High Voltage Transmission Grid Network.

Because of the Engineering Leadership Role within the Industry, that Trans Power held for the last Thirty Years, they have never been seriously Questioned, (**except by me**), about the Quality, Stability, and Reliability of Accepting Non-Conforming Wind Farms.

They have failed in their Stated duty to supply the correct 50Hz Energies at the Cheapest Price and, thus, operated the System very Inefficiently.

They have also allowed the Degeneration of the Security of Supply Ratios, towards making the NZ Power System equal to a Third World Level.

Within my 3/8/2018 letter, I asked the Directors to Stand up and be Counted to Promote the Closure of all forms of Asynchronous Generation but more so with Closing Down all the Useless Wind Farms.

Also Mentioned, was that if nothing was done they should then all Tender their Resignations, as they were Burdening the N Z Consumers with their lack of Integrity.

Clearly, Tim Lusk has by his Resignation, has done the only Honourable option he had by falling on his sword from being a Trans

3 of 3

Power NZ Ltd Director, which directly, acknowledged the Validity and Concept of a Real-World Energy Scenario that NZ is operating under, has no Genuine Technical or Operational Standing, but now Supports my Technical Dispersions and Content that has always **STATED not only NZ but also the World, does not need Wind Farms**, along with the Derivates Offshoots that have spawned Corruptive Financial Scams against the Electrical Consumers of the World.

**Future Director Actions  
Contemplated.**

Likewise, for the rest of the Directors and Management of Trans Power NZ Ltd Decisions, **not to** Instigate an Official Public Censure and Condemnation of the Wind Farm Experiment, along with a Recommendation to Formerly inform the Prime Minister Ardern's Government, to have all of the Wind Farms Closed Down, as soon as Practically Possible, indicates, that each Directors " Financial greed and Ego" is overriding any Sense of Community Service, to the Consumers of New Zealand for supplying Quality Electricity to them

I, and the Public of NZ await your Response and Action with Interest.

With Sincerity

Bill Harding      Electrical Systems Diagnostics Engineer
